

Deliverable D4.4

Version: FINAL

Date: 31/03/2013

Author: IUCN

Dissemination status: PU

Document reference: Deliverable_D4.4

Biodiversity Matrix (M27)

STATUS: FINAL VERSION

Project acronym: BIOFRESH

Project name: Biodiversity of Freshwater Ecosystems: Status, Trends, Pressures, and Conservation Priorities

Call and Contract: FP7-ENV-2008-1

Grant agreement

226874

no.:

Project Duration: 01/11/2009 – 30.04.2014 (54 months)

Co-ordinator: Leibniz-Institute of Freshwater Ecology and Inland Fisheries at Forschungsverbund Berlin e.V., Germany

Partners: RBINS, Royal Belgian Institute of Natural Sciences, Belgium

BOKU, Universität für Bodenkultur Wien, Austria

ICLARM, International Center for Living Aquatic Resources Management, Malaysia

IRD, Institut de Recherche pour le Développement, France

UDE, Universität Duisburg-Essen, Germany

IUCN, International Union for Conservation of Nature, Switzerland

UOXF.AC, Oxford University, UK

UB, Universitat de Barcelona, Spain

UFZ, Helmholtz Zentrum für Umweltforschung, Germany

UCL, University College of London, UK

UCBL, Université Claude Bernard - Lyon 1, France

UPS, Université Paul Sabatier- Toulouse 3, France

ECOLOGIC, Ecologic GmbH Institut für Internationale und Europäische Umweltpolitik, Germany

EC-ERC, Commission of the European Communities - Directorate General Joint Research Centre, Italy

UD, University of Debrecin, Hungary

NRM, Naturhistoriska riksmuseet, Sweden

FIN, FishBase Information and Research Group, Inc.

BIOFRESH

Biodiversity of Freshwater Ecosystems: Status, Trends, Pressures, and Conservation Priorities

Project no. 226874

Large scale collaborative project

Deliverable number	D4.4
Deliverable name	Biodiversity Matrix
WP no.	WP4
Lead Beneficiary (full name and Acronym)	IUCN
Nature	RP/M
delivery date from Annex I (proj. month)	M27
Delivered	yes
Actual forecast delivery date	31/03/2013 (M41)
Comments	Deliverable has been delayed due to the late submission of the HydroBASINS to IUCN. For this purpose an extension of the delivery month to M41 has been requested and it is part of the 3 rd Amendment to the Grant Agreement.

Project funded by the European Commission within the Seventh Framework Programme Dissemination Level	
PU	Public
PP	Restricted to other programme participants (including the Commission Services)
RE	Restricted to a group specified by the consortium (including the Commission Services)
CO	Confidential, only for members of the consortium (including the Commission Services)

PU	Public	✓
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the consortium (including the Commission Services)	

This project is supported by funding from the specific programme 'Cooperation', theme 'Environment (including Climate Change)' under the 7th Research Framework Programme of the European Union.

Name of the Authors	Name of the Partner	Logo of the Partner
Savrina Carrizo William Darwall	IUCN	 The IUCN logo consists of a blue circular graphic with a stylized 'C' shape on the left and the letters 'IUCN' in bold black capital letters on the right.

In case the report consists of the delivery of materials (guidelines, manuscripts, etc)

BIOMATRIX SUMMARY

This document provides metadata on the BioMatrix (BioFresh Task 4.4) to guide usage.

The BioMatrix is an output for the *BioFresh* project funded by the European Union under the Seventh Framework Programme (FP7), Theme 6 (Biodiversity of Freshwater Ecosystems: Status, Trends, Pressures and Conservation Priorities).

The BioMatrix is a data repository of contemporary distributions of freshwater biodiversity created by the *BioFresh* project, largely drawn from species range maps, a range of environmental variables, species trait data, and IUCN Red List™ species assessments. A particular advantage of the BioMatrix is that it enables spatial analyses within and between regions across the globe as, for the first time, it provides all the data in a common spatial framework, i.e. all data are mapped to the HydroBASINS¹ catchments, also created as part of the *BioFresh* project. In addition, the data will be available at other spatial resolutions such as WWF's freshwater ecoregions.

This dataset enables a wide range of spatial analyses, such as the creation of species richness maps to identify centres of diversity, centres of threat, and Freshwater Key Biodiversity Areas². Species range maps can also be analysed against the spatial distribution of a number of environmental variables providing the basis for subsequent species range modelling, and also for predictive modelling of species range shifts under various scenarios such as for climate change. Gap analyses in relation to the spatial overlap of protected areas and species distributions are also possible using data within the BioMatrix. See page 6 for some example outputs based on the BioMatrix data sets.

Time line

The BioMatrix is a "living" repository for data that is actively updated and added to ensure that knowledge on freshwater species available to the scientific and wider community is ever-expanding. Therefore, the addition of datasets to the BioMatrix is an ongoing process and updated releases of the BioMatrix will continue beyond March 28th 2013 as and when new components are added. A second public release of the BioMatrix is scheduled for the end of July 2013.

The longterm sustainability of the BioMatrix is assured as IUCN will continue to host, maintain, and update the database beyond the currently funded period of the BioFresh Project.

Key features

Platform – The BioMatrix contains data for a range of taxonomic groups at the European and global scales and has been split into text files of key taxonomic groups to enable easy access for different user groups.

Accessibility – The BioMatrix data are available for download via the IUCN Freshwater Biodiversity Unit website:

http://www.iucn.org/about/work/programmes/species/our_work/about_freshwater/what_we_do_freshwater/bio_fresh/

Geographical coverage – The data primarily include locations where IUCN Red List freshwater species assessments have been completed and mapped to date (see Figure 1 as an example). As further areas are completed, the data will be incorporated in the BioMatrix.

¹ Lehner, B. (2012) HydroBASINS version 1b. Global watershed boundaries and sub-basin delineation derived from HydroSHEDS data at 15 second resolution. Technical Documentation.

² Holland et al. (2012) Conservation priorities for freshwater biodiversity: The Key Biodiversity Area approach refined and tested for continental Africa. *Biological Conservation* 148: 167-179.

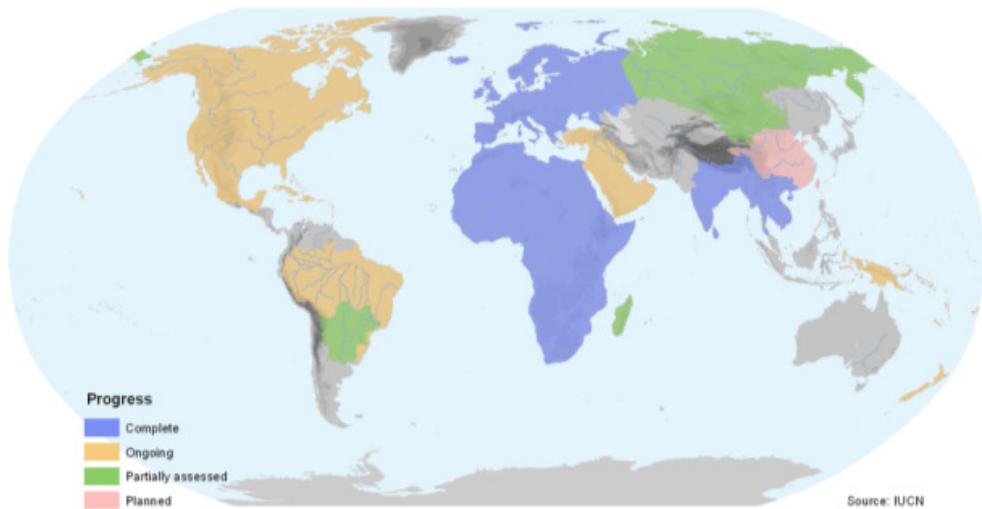

Figure 1: Map of freshwater fish red list assessment progress

Spatial resolutions – Spatial resolutions include HydroBASINS and WWF freshwater ecoregions. Ecoregion-scale data will be added to the BioMatrix for the second release in July 2013. Each species distribution is mapped to sub-catchments using the HydroBASINS global catchment layer. HydroBASIN catchments are available at twelve spatial resolutions and the species distributions have been mapped to either HydroBASIN level 8 or level 10 (depending on suitability for a given species). Mapping freshwater species distributions to freshwater catchments is necessary as catchments are the management unit for freshwater species and allow for the improvement of spatially-explicit scientific knowledge and conservation planning decisions.

Freshwater species coverage – Species groups include waterbirds, mammals, amphibians, crabs, crayfish, fish, odonata, molluscs, reptiles, shrimps, turtles and aquatic plants. Some of these data sets will be added to the BioMatrix for the second release in July 2013.

Temporal coverage – The species data are largely based on the latest IUCN Red List assessment version 2012.2 and the year the associated distributions were mapped to a shapefile range from 2004 - 2013.

Environmental data coverage – The environmental data have been extracted at the HydroBASIN level 8 resolution and will be made available pending publishing permissions.

Species distribution - Biological data will be presented by different metrics (e.g. presence in each HydroBASIN and total number of species etc).

Species trait data – Species trait data are currently limited to those made available through a number of projects funded by the European Commission as downloaded from the website: www.freshwaterecology.info.

Spatial Data Fields

FIELD	TYPE	DESCRIPTION
BINOMIAL	String	Scientific name of the species.
CITATION	String	Individual/s or institution responsible for providing the data.
COMPILER	String	Name of the individual/s or institution responsible for generating the polygon, if not IUCN.
DIST_COMM	String	Distribution comments that refer directly to the polygon.
HYBAS_ID	Numeric	River sub-catchment ID (Level 8 or 10 HydroBASINS as appropriate for the species).
ISLAND	String	Name of the island the sub-catchment is on.
LEGEND	String	Code containing the combinations of the presence, origin and seasonality fields determining how the map will be displayed on the IUCN Red List website.
ORIGIN	Integer	Why/ How the species is in this area, codes listed below.
PRESENCE	Integer	Is/Was the species in this area, codes listed below.
SEASONAL	Integer	What is the seasonal presence of the species in the area, codes listed below.
SOURCE	String	Source of distribution range given.
SUBPOP	String	Epithet.

SUBSPECIES	String	Epithet.
TAX_COMM	String	Taxonomic comments that refer directly to the polygon. Includes notes on polygons pertaining to subspecies or subpopulations.
YEAR	Integer	Year in which the polygon was mapped or compiled, or modified.

PRESENCE

CODE	PRESENCE
1	Extant
2	Probably Extant
3	Possibly Extant
4	Possibly Extinct
5	Extinct (post 1500)
6	Presence Uncertain

Extant – The species is known or thought very likely to occur presently in the area, usually encompassing current or recent (post 1980) localities where suitable habitat at appropriate altitudes (or depths) remains.

Probably Extant – The species' presence is considered probable, either based on extrapolations of known records, or realistic inferences (e.g., based on distribution of suitable habitat at appropriate altitudes and proximity to areas where it is known or thought very likely to remain Extant). 'Probably Extant' ranges often extend beyond areas where the species is Extant, or may fall between them.

Possibly Extant – The species may possibly occur, and should be searched for, but there are no known records and less than probably occurrence. 'Possibly Extant' ranges often extend beyond areas where the species is Extant or Probably Extant, or may fall between them.

Possibly Extinct – The species was formerly known or thought very likely to occur in the area, but it is most likely now extirpated from the area because habitat loss/other threats are thought likely to have extirpated the species and/or owing to a lack of records in the last 30 years.

Extinct – The species was formerly known or thought very likely to occur in the area, but there have been no records in the last 30 years and it is almost certain that the species no longer occurs, and/or habitat loss/other threats have almost certainly extirpated the species.

Presence Uncertain – The species was formerly known or thought very likely to occur in the area but it is no longer known whether it still occurs (usually because there have been no recent surveys).

Notes:

- a) These codes are mutually exclusive; a polygon coded as "Extant" cannot also be coded as "Extinct".
- b) To obtain the total historical range of a species, one would sum polygons for Extant, Probably Extant, Possibly Extinct, Extinct and Presence Uncertain, but not Possibly Extant.

ORIGIN

CODE	ORIGIN
1	Native
2	Reintroduced
3	Introduced
4	Vagrant
5	Origin Uncertain

Native – The species is/was native to the area.

Reintroduced - The species is/was reintroduced through either direct or indirect human activity.

Introduced – The species is/was introduced outside of its historical distribution range through either direct or indirect human activity.

Vagrant – The species is/was recorded once or sporadically, but it is known not to be Native to the area.

Origin Uncertain - The species' provenance in an area is not known (it may be Native, Reintroduced or Introduced).

Notes:

- a) These codes are mutually exclusive; a polygon coded as "Native" cannot also be coded as "Introduced".

SEASONALITY

CODE	SEASONALITY
1	Resident
2	Breeding Season
3	Non-breeding Season
4	Passage
5	Seasonal Occurrence Uncertain

Resident – the species is/was known or thought very likely to be resident throughout the year.

Breeding Season – The species is/was known or thought very likely to occur regularly during the breeding season and to breed.

Non-breeding Season – The species is/was known or thought very likely to occur regularly during the non-breeding season. In the Eurasian and North American contexts, this encompasses ‘winter’.

Passage – The species is/was known or thought very likely to occur regularly during a relatively short period(s) of the year on migration between breeding and non-breeding ranges.

Seasonal Occurrence Uncertain – The species is/was present, but it is not known if it is present during part or all of the year.

TERMS AND CONDITIONS OF USE

The terms and conditions of use of the Biomatrix data are the same as for the IUCN Red List of Threatened Species and are provided online at: <http://www.iucnredlist.org/info/terms-of-use>

USE CASES

The BioMatrix can be used to build a variety of global and European biodiversity models. Example use cases are given below to outline the further usage that the BioMatrix data can support.

1. Compile maps of species richness for a given set of species at a given spatial resolution (e.g. Natura2000) within a region (e.g. country). Figure 2 shows the richness of threatened species based on BioMatrix data at HydroBASIN level 8.
2. Test correlation between species richness and environmental data at a given spatial resolution (e.g. HydroSHEDS) for a given region (e.g. continent).
3. Look up the native ranges of introduced species.
4. Patterns of species richness and diversity can be understood at the catchment scale which in turn can be used to identify Key Biodiversity Areas (KBAs).

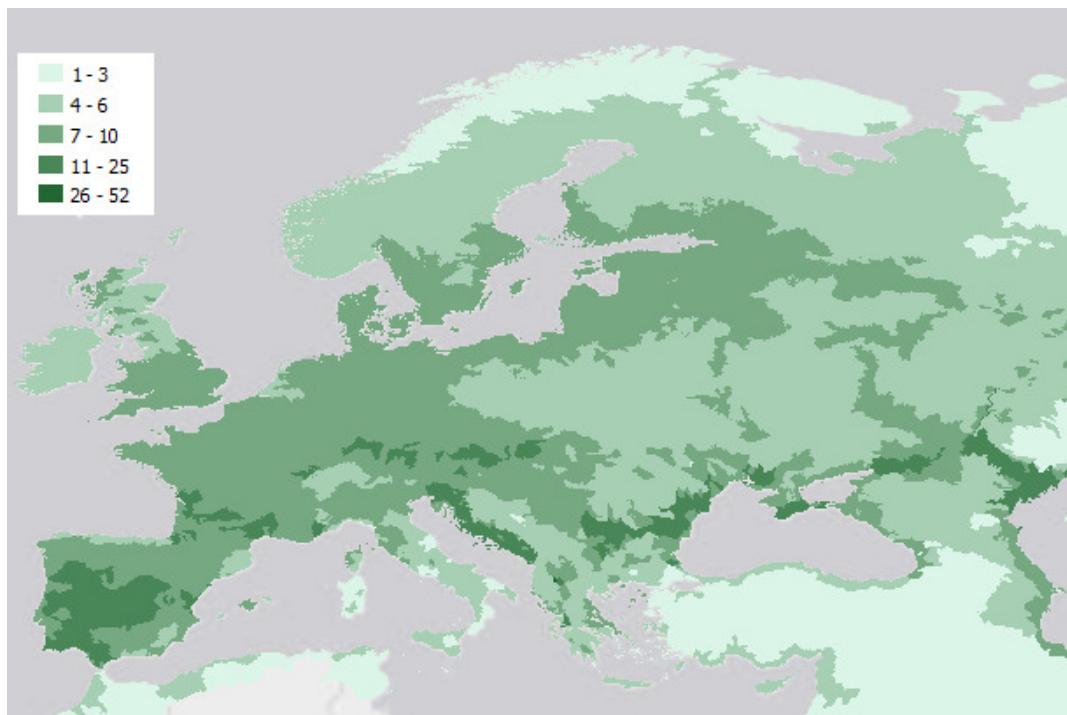

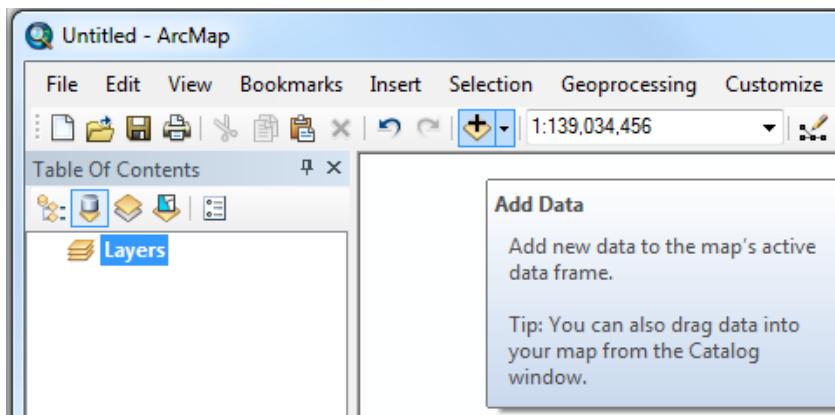

Figure 2: Map of threatened species richness for European fishes, molluscs, odonata and plants.

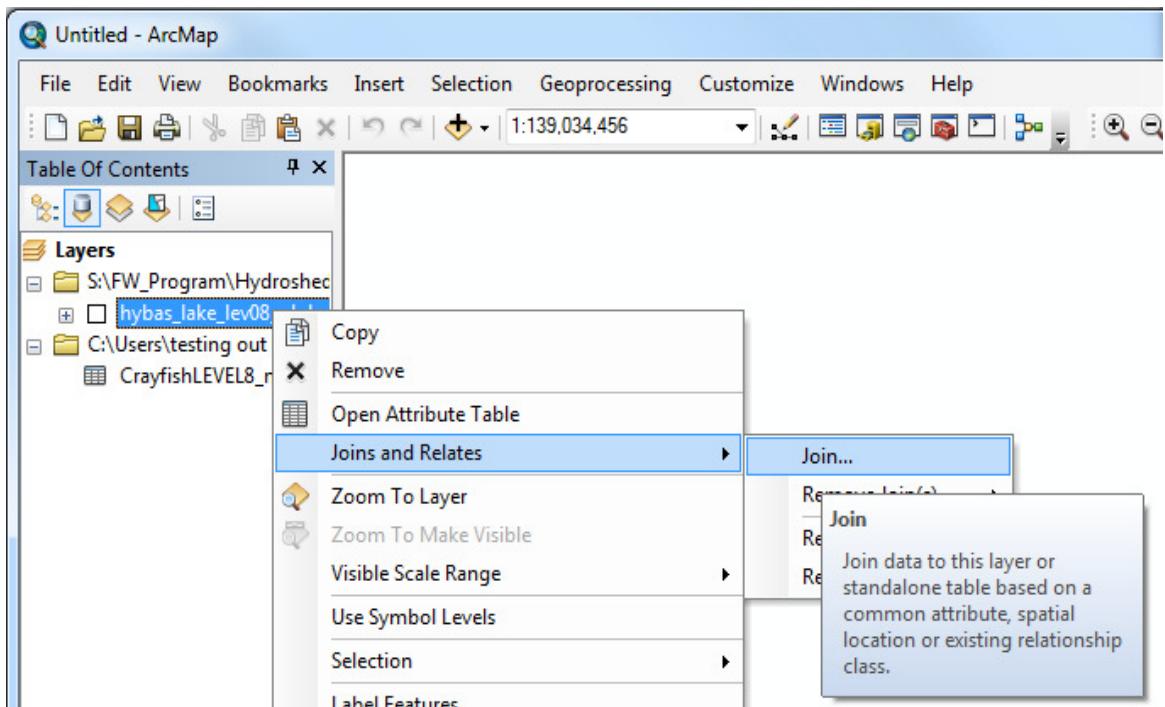

Joining species distribution data to HydroBASINS geometry

The following step-by-step example uses ArcMap 10.1 as the demonstration software but similar principles apply when using other GIS software.

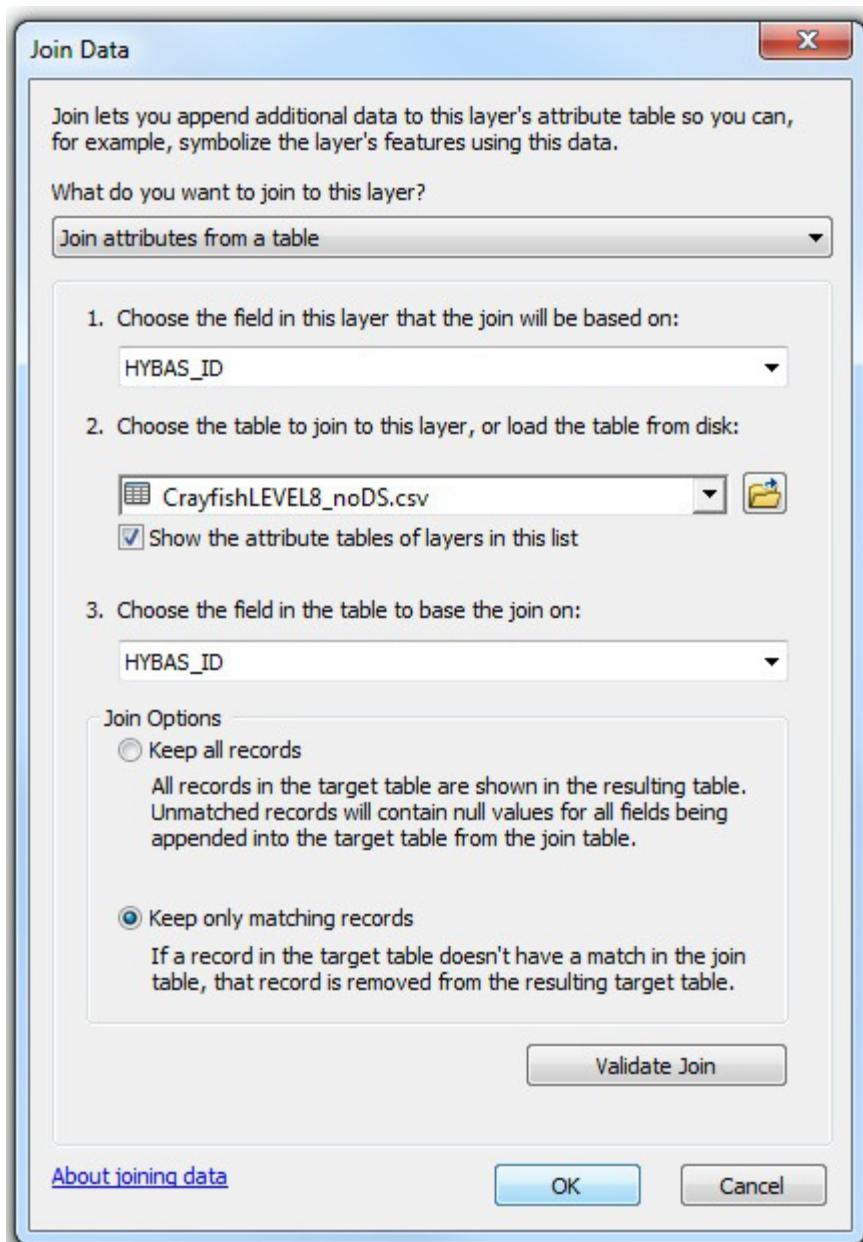

1. Import species data into ArcGIS using the Add Data button. 

2. Import HydroBASINS data into ArcGIS using the Add Data button.
3. Join the species data to the HydroBASINS file by right-clicking the HydroBASINS layer and selecting 'Joins and Relates' and then 'Join'.

4. Make selections as in the following screenshot but select your desired species dataset at point 2 (in this example we are joining CrayfishLEVEL8_noDS.csv), then click OK. This step may take some time to complete. Once complete, the joined data will be contained in the HydroBASINS file (in this example the hybas_lake_lev08 file).

5. After the two datasets have joined you can then run spatial analyses on the joined data or export it as a shapefile should you wish to use the joined data again at a later date

DATA SETS

Table 1 provides a list of the datasets available from the first release in March 2013. Table 2 provides a list of the datasets that will be available in the second release of data after the next Red List update in July 2013.

Table 1: Overview of the datasets in the BioMatrix.

	Taxa Group	Number of Species	Spatial resolution
European	Molluscs	680	HydroBASINS level 8 & 10
	Plants	355	HydroBASINS level 8 & 10
	Fishes	530	HydroBASINS level 8 & 10
	Odonata	139	HydroBASINS level 8 & 10
Global	Crayfish	505	HydroBASINS level 8 & 10
	Mammals	142	HydroBASINS level 8 & 10

Table 2: Overview of the datasets to be included pending publishing in the next Red List update.

	Taxa Group	Number of Species	Spatial resolution
New Zealand	Molluscs		HydroBASINS level 8 & 10
	Plants		HydroBASINS level 8 & 10
	Fishes		HydroBASINS level 8 & 10
	Odonata		HydroBASINS level 8 & 10
North America	Fishes		HydroBASINS level 8 & 10
Global	Shrimps		HydroBASINS level 8 & 10

SPECIES LISTS

European Plants

European Plant species	HydroBasin Level
<i>Agrostis canina</i>	8
<i>Agrostis stolonifera</i>	8
<i>Aldrovanda vesiculosa</i>	8

Global Mammals

Global Mammal species	HydroBasin Level	Notes
<i>Amphinectomys savamis</i>	10	
<i>Anotomys leander</i>	8	
<i>Aonyx capensis</i>	8	
<i>Aonyx cinerea</i>	8	
<i>Aonyx congicus</i>	8	
<i>Arvicola amphibius</i>	8	
<i>Arvicola sapidus</i>	8	
<i>Atilax paludinosus</i>	8	
<i>Axis porcinus</i>	10	
<i>Babyrousa babyrussa</i>	8	
<i>Babyrousa celebensis</i>	8	
<i>Babyrousa togeanensis</i>	8	
<i>Baiyankamys habbema</i>	10	
<i>Baiyankamys shawmayeri</i>	10	
<i>Blastocerus dichotomus</i>	8	
<i>Bubalus arnee</i>	10	
<i>Castor canadensis</i>	8	
<i>Castor fiber</i>	8	
<i>Cephalorhynchus eutropia</i>	8	
<i>Chibchanomys orcesi</i>	10	
<i>Chibchanomys trichotis</i>	10	
<i>Chimarrogale hantu</i>	10	
<i>Chimarrogale himalayica</i>	10	
<i>Chimarrogale phaeura</i>	10	
<i>Chimarrogale platycephalus</i>	8	
<i>Chimarrogale styani</i>	8	
<i>Chimarrogale sumatrana</i>	10	
<i>Chironectes minimus</i>	8	
<i>Choeropsis liberiensis</i>	8	
<i>Colomys goslingi</i>	8	
<i>Crossomys moncktoni</i>	10	
<i>Ctenomys budini</i>	10	
<i>Dasymys montanus</i>	10	
<i>Delanymys brooksi</i>	10	
<i>Deltamys kempi</i>	8	
<i>Deomys ferrugineus</i>	8	
<i>Dephomys defua</i>	8	
<i>Desmana moschata</i>	8	
<i>Desmomys harringtoni</i>	8	
<i>Elaphurus davidianus</i>	10	
<i>Galemys pyrenaicus</i>	8	

Global Mammal species	HydroBasin Level	Notes
<i>Genetta piscivora</i>	8	
<i>Hippopotamus amphibius</i>	8	
<i>Holochilus brasiliensis</i>	8	
<i>Holochilus chacarius</i>	8	
<i>Holochilus sciureus</i>	8	
<i>Hydrochoerus hydrochaeris</i>	8	
<i>Hydrochoerus isthmicus</i>	8	
<i>Hydromys chrysogaster</i>	8	
<i>Hydromys hussoni</i>	10	
<i>Hydromys neobritannicus</i>	8	
<i>Hydromys ziegleri</i>	10	
<i>Hydropotes inermis</i>	8	
<i>Hyemoschus aquaticus</i>	8	
<i>Ichthyomys hydrobates</i>	8	
<i>Ichthyomys pittieri</i>	10	
<i>Ichthyomys stolzmanni</i>	10	
<i>Ichthyomys tweedii</i>	10	
<i>Inia geoffrensis</i>	10	
<i>Kobus ellipsiprymnus</i>	8	
<i>Kobus kob</i>	8	
<i>Kobus leche</i>	8	
<i>Kobus megaceros</i>	10	
<i>Kobus vardonii</i>	10	
<i>Limnogale mergulus</i>	10	
<i>Lipotes vexillifer</i>	10	
<i>Lontra canadensis</i>	8	
<i>Lontra felina</i>	8	without marine range
<i>Lontra longicaudis</i>	8	
<i>Lontra provocax</i>	8	
<i>Lundomys molitor</i>	8	
<i>Lutra lutra</i>	8	
<i>Lutra maculicollis</i>	8	
<i>Lutra sumatrana</i>	8	
<i>Lutreolina crassicaudata</i>	8	
<i>Lutrogale perspicillata</i>	8	
<i>Micropotamogale lamottei</i>	10	
<i>Micropotamogale ruwenzorii</i>	8	
<i>Microtus richardsoni</i>	8	
<i>Mustela lutreola</i>	8	
<i>Nectomys apicalis</i>	8	
<i>Nectomys magdalena</i> ae	10	
<i>Nectomys palmipes</i>	8	
<i>Nectomys rattus</i>	8	
<i>Nectomys squamipes</i>	8	

Global Mammal species	HydroBasin Level	Notes
<i>Neofiber alleni</i>	8	
<i>Neomys anomalus</i>	8	
<i>Neomys fodiens</i>	8	
<i>Neomys teres</i>	8	
<i>Neophocaena asiaeorientalis</i>	10	
<i>Neotomys eboriosus</i>	8	
<i>Neovison vison</i>	8	
<i>Nesokia bunnii</i>	8	
<i>Neusticomys monticolus</i>	8	
<i>Neusticomys mussoi</i>	10	
<i>Neusticomys oyapocki</i>	8	
<i>Neusticomys peruviensis</i>	10	
<i>Neusticomys venezuelae</i>	8	
<i>Niloplagiatus plumbeus</i>	10	
<i>Ondatra zibethicus</i>	8	
<i>Orcaella brevirostris</i>	8	without marine range
<i>Ornithorhynchus anatinus</i>	8	
<i>Oryzomys couesi</i>	8	
<i>Oryzomys palustris</i>	8	
<i>Otomys lacustris</i>	10	
<i>Parahydromys asper</i>	10	
<i>Pelomys fallax</i>	8	
<i>Phoca vitulina</i>	8	without marine range
<i>Platanista gangetica</i>	10	
<i>Potamogale velox</i>	8	
<i>Prionailurus planiceps</i>	10	
<i>Prionailurus viverrinus</i>	10	
<i>Procyon cancrivorus</i>	8	
<i>Pteronura brasiliensis</i>	8	
<i>Pusa caspica</i>	8	
<i>Pusa hispida</i>	8	without marine range
<i>Pusa sibirica</i>	8	
<i>Rheomys mexicanus</i>	10	
<i>Rheomys raptor</i>	10	
<i>Rheomys thomasi</i>	10	
<i>Rheomys underwoodi</i>	10	
<i>Rhinoceros unicornis</i>	10	
<i>Rucervus duvaucelii</i>	10	
<i>Rucervus eldii</i>	10	
<i>Ruwenzorisorex suncooides</i>	10	
<i>Scapteromys aquaticus</i>	8	
<i>Sigmodon inopinatus</i>	10	
<i>Sigmodon peruanus</i>	8	
<i>Sorex alaskanus</i>	10	

Global Mammal species	HydroBasin Level	Notes
<i>Sotalia fluviatilis</i>	8	
<i>Sousa chinensis</i>	10	without marine range
<i>Sousa teuszii</i>	8	without marine range
<i>Tapirus bairdii</i>	8	
<i>Tapirus indicus</i>	10	
<i>Tapirus pinchaque</i>	10	
<i>Tapirus terrestris</i>	8	
<i>Thryonomys swinderianus</i>	8	
<i>Tragelaphus spekii</i>	8	
<i>Trichechus inunguis</i>	10	
<i>Trichechus manatus</i>	10	without marine range
<i>Trichechus senegalensis</i>	10	without marine range
<i>Xeromys myoides</i>	10
